

Certainly! Below is an expanded, simple, and clear version of your presentation on **Future Jobs and Labor Market Requirements** designed to last about 10 minutes. It includes easy language, examples, and some interactive questions to engage your audience.

Future Jobs and Labor Market Requirements

Good morning everyone,

Today, I want to talk about future jobs and what skills people will need to get good jobs in the future.

1. Why Are Jobs Changing?

Jobs are changing because of new technology like computers, robots, and artificial intelligence (AI). These new tools help people do work faster and better. Also, the world is trying to protect the environment, so many new jobs are related to clean energy.

Example:

Before, people went to stores to buy things. Now, many shop online using phones or computers. Because of this, delivery jobs are growing, but cashier jobs are becoming fewer.

Question for you:

How many of you have bought something online recently?

2. What Jobs Will Grow in the Future?

Many jobs will grow, especially in technology, health, and the environment. Here are some important jobs:

-

Software Developer: They make apps and programs for phones and computers. For example, the apps you use on your phone are made by software developers.

-

-

AI Specialist: They teach computers to think and learn, like robots or smart assistants.

-

-

Big Data Analyst: They study large amounts of information to help companies make better decisions.

-
-

Cybersecurity Expert: They protect computers and data from hackers.

-
-

Renewable Energy Engineer: They work with solar and wind energy to help the environment.

-
-

Healthcare Workers: Doctors, nurses, and caregivers will always be needed because people need health care.

-
-

Content Creators: People who make videos, blogs, and social media posts.

-
-

Delivery Drivers: Because of online shopping, delivery jobs are increasing.

-
-

Farmworkers with Technology: Farming is changing with new machines and technology.

-

Example:

A renewable energy engineer might design solar panels that use sunlight to make electricity.

3. Jobs That Might Disappear

Some jobs will become less common because machines can do them faster and cheaper. These jobs include:

-

Data entry clerks who type information into computers.

-
-

Bank tellers who help customers with money.

-
-

Cashiers in stores.

-
-

Some factory jobs done by robots.

-

Example:

Many people now use ATMs or mobile banking apps instead of going to a bank teller.

4. Important Skills for Future Jobs

To get a good job in the future, people need to learn new skills. These skills include:

-

Technology skills: Knowing how to use computers and software.

-
-

Problem-solving: Finding solutions when problems happen.

-
-

Creativity: Thinking of new ideas and ways to do things.

-
-

Communication: Talking and working well with others.

-
-

Flexibility: Being ready to learn new things and adapt to change.

-
-

Teamwork: Working well with other people.

-

Example:

If you work as a software developer, you need to solve problems when the program does not work.

5. How Can We Prepare for the Future?

To be ready for future jobs, we should:

-

Keep learning new things, especially about technology.

-
-

Take online courses or attend workshops.

-
-

Practice communication and teamwork skills.

-
-

Be open to new types of work, like working from home or freelancing.

-
-

Learn languages because many companies work internationally.

-

Example:

You can learn coding online for free on websites like Codecademy or Khan Academy.

6. New Ways of Working

In the future, many people will work from home or have flexible hours. This is already happening because of the internet and technology. Some people will work part-time or as freelancers, which means they work for different companies instead of one company.

Example:

A graphic designer can create pictures for a company while sitting at home, using a computer and internet.

7. New Jobs We Don' t Know Yet

Some jobs of the future do not exist today. For example:

-

Organ Creator: Scientists who make human organs using technology.

-

Metaverse Planner: Someone who builds virtual worlds.

-

Algorithm Bias Auditor: Someone who checks if computer programs are fair and do not have bias.

-

These jobs will need both technical skills and creativity.

8. Why Is This Important?

Understanding future jobs and skills helps us make good decisions about education and careers. If we know what skills are needed, we can prepare better and find good jobs. It also helps countries plan for the future and support workers.

9. What Can You Do Now?

-

Think about what jobs interest you.

-

Start learning skills related to those jobs.

-

Practice using technology.

-
-

Work on your communication and teamwork skills.

-
-

Stay curious and ready to learn new things.

-

Conclusion

In conclusion, the job market is changing fast because of technology and new needs. Many new jobs will appear, and some old jobs will disappear. To succeed, we must keep learning, be flexible, and develop both technical and soft skills.

Thank you very much for listening. I hope this information helps you think about your future career.

Tips for Speaking:

-

Speak slowly and clearly.

-
-

Use the examples to explain your points.

-
-

Ask simple questions to keep your audience interested.

-
-

Take short pauses between points.

-

If you want, I can help you prepare slides or notes for this presentation. Would you like that?
